

Rapid BW Assessment specific instructions for Sybase Database

This document describes the instruction to execute a rapid assessment for BW.

The operation is performed on your Sybase Database of **your BW Productive system**. It consists of SELECT statements on metadata (catalog) and statistical data only. There is no impact and no read on your master data, neither transactional data.

Additionally, please execute sizing notes (step 5). This will allow us to estimate the sizing of your system and help us propose a more suitable migration path for you.

Pre requirements:

- To have access to ASE database
- To have a dedicated database user with read access rights to the <OWNER_SCHEMA> to be able to execute the scripts.

Steps:

1. Log in your BW system with SAP GUI Logon and recover database and Owner schema name in **System/Status** Menu.
2. Open the 2 SQL scripts provided in the Sybase Folder and replace <SID> with database and <OWNER_SCHEMA> with the Owner schema previously found.

For example, you have added the database and schema like "BIP.SAPSR3." before each table.

3. Log in to the ASE database:
isql -U<OWNER_SCHEMA> -S<SID> -P<password> -X
4. Perform the operation for each script in step 2.
 - o Copy and paste the script
 - o Export the results into a file:
 - go > *Base_Tables.xlsx* for base SQL script
 - go > *stat_Tables.xlsx* for stats SQL script
5. In addition to the Base, Stat, please also execute the following SAP Note:
<https://me.sap.com/notes/2296290/E>
6. Upload all the resulting generated files to the SAP shared folder mentioned in the onboarding email according to the following naming convention:
7. **Once you uploaded all the required files, please rename this file from: ko.txt to ok.txt**

Renaming this file will **notify the SAP assessment team** and will **automatically trigger the next step** of the onboarding process.
