

Readiness assessment for BDC BW on AnyDB – not HANA- Instructions

This document describes the instructions to **execute a readiness assessment for BDC in your BW on Any Database.**

The operation is performed on **your BW productive system**, on application level through SAP GUI and the download of the 2 output files is done on your local computer, within seconds. It consists of SELECT statements on metadata (catalog) and statistical data only. There is no impact and no read on your master data, neither transactional data.

Additionally, please execute the sizing notes (step 7). This will allow us to estimate the sizing of your system and help us propose a more suitable migration path for you.

Pre-requirements:

- To have access to the BW System via SAP LOGON
- To have access and right authorization to run the transaction DB02/DBACOCKPIT
- A valid ABAP user with read access to the BW Schema
- **Point of attention: when executing the scripts, ensure to have the limits set to 1,000,000 records, in order to avoid results truncation.**

Steps:

1. Based on your BW Release and database, select one of the following directories that you can find in the provided package
 - a. First select the type of database
 - b. Second, select the release of your BW system
 - c. Get 2 SQL Statement files (Base Tables and Stat Tables)
 - d. (Optional) Retrieve BW Planning script
2. Log in your BW Production system using SAP LOGON
3. Run the transaction DB02 or DBACOCKPIT, and search on the left-hand side, the SQL Editor
4. Copy and paste the scripts defined in the files from step1
5. After running each script, in the result screen:
 - Click **Export** → **Spreadsheet**
 - **Choose file type: Excel (in .XLSX format)**
6. Upload all the resulting generated files to the SAP shared folder mentioned in the onboarding email according to the following naming convention
 - Base Tables → Base Tables.xlsx
 - Stat Tables → Stat Tables.xlsx
 - (Optional) BW Planning → BW Planning Tables.xlsx

7. In addition to the Base and Stat files, please also execute the following SAP Note in all cases:
<https://me.sap.com/notes/2296290/E>

8. Once you have uploaded all the required files, please create and upload an empty text file named ok.txt to the same shared folder

Uploading this file will notify the SAP assessment team and will automatically trigger the next step of the onboarding process.

If you are unable to rename the file, please upload a new file named ok.txt yourself.
