

ODP RFC Assessment - Onboarding Instructions

This document describes the instructions to **execute an assessment for your system**.

The operation is performed on **your productive system** and includes running several SQL scripts on the underlying database.

All scripts are read-only (SELECT statements on metadata/statistics). There is no impact on master data or transactional data.

Steps

1. Open the instructions in the GitHub package provided,
2. Select the script available in the folder,
3. Execute the scripts and **follow the instructions**
 - a. **Log in to your production via SAP Logon**
 - b. **Open DB02 or DBACOCKPIT, then SQL Editor**
 - c. **Copy/paste the script and execute**
 - d. **After running each script, in the result screen:**
 - **Click Export → Spreadsheet**
 - **Choose file type: Excel (in .XLSX format)**

==> NB: for multiple systems, please add the SID in 3 alphanumeric character at the beginning of the file name. For example: if I have 2 system SID:

- For SID "S4H": **all the files should start with "S4H_..."**
- For SID "BWP": **all the files should start with "BWP_..."**

4. Upload all the resulting generated files to the SAP shared folder mentioned in the onboarding email according to the naming convention described in the instructions

5. Once you uploaded all the required files, please rename the txt file in the shared folder:

"ko.txt" rename to "ok.txt"

Renaming this file is mandatory. It will notify the SAP assessment team and will automatically trigger the next step of the onboarding process.
